$A\bar{\chi} = \bar{b}$ con almost dos soluciones distintes $\bar{C}_1 \, \bar{\gamma} \, \bar{C}_2$ $A\bar{c}_1 = \bar{b}$ $A(\lambda C_1 + \beta C_2) = \lambda A\bar{c}_1 + \beta A\bar{c}_2 = \lambda \bar{b} + \beta \bar{b}$ $A(\lambda C_1 + \beta C_2) = \lambda A\bar{c}_1 + \beta A\bar{c}_2 = \lambda \bar{b} + \beta \bar{b}$ $A(\lambda C_1 + \beta C_2) = \lambda A\bar{c}_1 + \beta A\bar{c}_2 = \lambda \bar{b} + \beta \bar{b}$ $A(\lambda C_1 + \beta C_2) = \lambda A\bar{c}_1 + \beta A\bar{c}_2 = \lambda \bar{b} + \beta \bar{b}$ $A(\lambda C_1 + \beta C_2) = \lambda A\bar{c}_1 + \beta A\bar{c}_2 = \lambda \bar{b} + \beta \bar{b}$

zolución buego tenemos so soluciones

Domostración de que si uso sslema trem + de um selución tiena xo
